<Lin> **Linnaean Names are spelled using Loglan respelling rules. In the past Gloyn used Linnaean Names as they were written by their authors.**
<ISV> **International Scientific Vocabulary words are converted to CVCVC, CVVC, or CVVVC roots and are given a CV or CVV suffix.**
<Int.> **International word.**
<DJAN> **Names are spelled to resemble their place of origin. All 26 letters can be used in names.**
<EXPANSION WORDS> **We were not in contact with TLI between the years 1964 – 1998. We are using the words we coined during those years.**
<AFVTL VOCABULARY> **We have tracked down the words used in "A First Visit To Loglandia". Try looking in this Loglan/Gloyn dictionary first when looking for the definition of complex predicate words. Then try the English/Gloyn dictionary, and finally the Gloyn/English ------- English/Gloyn dictionary.**
<$> **additional predicate**
<Bor> Sometimes "Borrowings" are names.
*** This Gloyn Complex Dictionary is not completely alphabetized. It is completely searchable. Hopefully all the complex predicates in AFVTL can be found here.**

These are the abbreviations that indicate the part of speech in English a

definition represents: (n) Noun;(a) Adjective; (af) Affix; (art) Article;

(av) Adverb; (c) Conjunction; (h) Honorific; (i) Interjection; (l) Letter;

(ms) Mathematical Sign; (na) Name; (op) Operator; (p) Pronoun; (ph) Phrase;

(pm) Punctuation Mark; (pp) Preposition; (v) Verb; (va) Verb Auxiliary;

(voc) Vocative; (Cpd) Compound?

Note: Because of the ridgid case tage pattern, it is impossible to

speak Loglan using only Loglan's 850 root words. Loglan has no way to

change the case tag pattern of a predicate except by adding an affix

and then assigning a new case tag pattern. Often these additions muddy

the meaning of the new predicated which in turn must be given a

definition and a case tage pattern by a committee at TLI (The

Loglan Institute). The Loglan complex predicates as given in this

dictionary are needed to read "A First Visit To Loglandia"

as it was presented in Loglan. AFVTL has not been rendered into Gloyn.

It is posssible to say almost anything in Gloyn with the 850 basic

words because each root can be modified with any of the 430 case tag

suffixes. No appeal to a committee must be made; just replace the

standard case tag with a more useful tag and move along. Loglan needs

about 30,000 new words to be functional while Gloyn is useable out

of the box. Each Loglandic word in this Loglan/Gloyn Dictionary is given

with the date and initials of its creator for Loglan. Also given

are Gloyn equivalents. Use the Loglandic form, the Gloyn suggested form,

or make your own complex predicate or symplified predicate.
